

SOLVENT FLOWS FROM OVER 40 JETS IN THE CLEANING TANK TO WASH DEBRIS FROM INDUSTRIAL PARTS.

Cleaning Tank

Diaphragm Pump

Cleaning Tank

- Solvent flows from jets located under the lid, on the bottom and sides of the cleaning tank.
- Stainless steel construction of delivery tubes and tank for long life.

Features

- Powered by 2 Uni-ram 4" dual diaphragm pumps, 3.7 gal/min, air powered.
- Diaphragm pumps pump solvent to the jets from the 8 gallon reservoir; solvent returns to the reservoir.
- Timer, maximum time of 5 minutes.
- Flow-through brush, activated by a foot pedal.

Additional Model

UPW400W:

- Same as UPW400 except for cleaning parts with a waterborne solution.

UPW400E:

- Ready for connection to a Uni-ram Solvent Recycler.
- Quick connects provided on 8 gallon reservoir tank for ease of hose connection.
